MyProject: a formalization blueprint

A. Author

August 22, 2026

Chapter 1

A first result

This chapter is a worked example of every blueprint construction you will need; replace its mathematics with your own. The source is cited as [Mod20], and the paper-gap apparatus is demonstrated by `docs/paper-gaps/demo_scope_restriction.tex`.

Theorem 1.1 (Squares are nonnegative)**.** *For every real number x,*

$$0 \le x^2. \tag{1.1}$$

Proof. The square is a product of two equal factors; a product of two nonpositive or two nonnegative factors is nonnegative. □

Theorem 1.2 (A dependent result)**.** *A sum of squares is nonnegative, by* (1.1) *applied to each summand. This entry shows a statement whose proof is not yet formalized: it carries* `\notready` *and its node stays amber in the dependency graph until a Lean proof exists.*
